## **FOREWORD**

The principal function of the Farm Business Survey (FBS) is to inform the UK Government and EU agricultural policy makers of the current financial state of the different sectors of UK farming. However, the FBS also provides a wealth of physical and financial data which are collated and analysed to provide benchmarking data against which farmers can compare the results of their own enterprises and businesses.

Until 1992, ‘Farm Management Standards’ were published in the Department of Agriculture’s publication ‘Agriculture in Northern Ireland’. Following the withdrawal from publication of ‘Agriculture in Northern Ireland’ the ranges in the performances of farm enterprises recorded in the FBS have been published in the annual report ‘Farm Incomes in Northern Ireland’. With the renewed interest and focus on farm performance, it was decided that this new booklet, introduced in 2003, should be produced and contain farm performance data for a greater range of enterprises.

This Farm Performance Indicators publication presents a range of physical and financial performances for each of the main farm enterprises against which producers can assess, or benchmark, the performance of their own particular enterprises. In addition, fixed costs data by farm type are also available so that farmers can make some assessment of their expenditure on overheads. The performance data refer to results achieved by farmers with annual management accounts ending within a six month period beginning January 2006 which is the first year of the introduction of the Single Farm Payment under CAP reform.

It is hoped that farmers will find this performance data useful. Policy and Economics Division, DARD, would welcome any suggestions for changes in content or format from users of the data.

**NORMAN FULTON**

**November 2006**

## **NORTHERN IRELAND FARM PERFORMANCE INDICATORS**

In recent years ‘benchmarking’ has become the widely accepted term used when comparing the performance of individual businesses against standards of performance set for their industrial sectors. As far as agricultural production is concerned this is not a new process. Farmers have been comparing the performance of their enterprises and businesses with published data since the 1930s.

### ***Source of farm performance data for Northern Ireland***

In Northern Ireland, farm accounts from a representative sample of 400 farms across Northern Ireland are submitted to the Farm Business Survey (FBS). These are processed in gross margin format by Policy and Economics Division of the Department of Agriculture and Rural Development (DARD). This means that, in addition to whole farm data, detailed physical and financial data for individual farm enterprises are available for comparison purposes.

### ***Classification of farm performance data***

Each of the enterprise performances is assessed on the basis of either gross margin per head or gross margin per hectare. Given the range in performance achieved by producers, the gross margin of each farm enterprise is generally classified under one of 4 headings viz:- excellent, good, moderate and poor. The good and moderate categories comprise all the enterprises with gross margins within one standard deviation above and below the mean value respectively. Those enterprises with performances which fall within the range one and two standard deviations above and below the mean performance respectively, comprise the

excellent and poor categories. When there is a normal distribution of results, the excellent category includes approximately 15% of farms, good 33%, moderate 33% and poor 15%. Approximately 4% of the farm enterprises in the sample are excluded, that is the 2% of results which are beyond two standard deviations on either side of the mean result. An ‘excellent’ or ‘good’ gross margin represents an above average performance whereas ‘moderate’ or ‘poor’ represent a below average performance.

### ***Assessment of performance***

By comparing an enterprise’s performance with that of the published ‘farm performance indicators’ the farmer can immediately assess where the performance of the enterprise is in relation to the range in performances being achieved by other producers. More detailed analysis of an enterprise’s performance can assist the farmer to identify the strengths and/or weaknesses in the performance of the particular enterprise. This can then be fed back into the management process thereby leading to an improvement not only in enterprise performance but also in whole farm performance.

### ***Single Farm Payment***

The enterprise data for 2005/06 covers the first year of the operation of the Single Farm Payment Scheme. As Single Farm Payment is decoupled from production and not linked to any particular enterprise it is not included in enterprise output. For similar reasons Less Favoured Area Compensatory Allowance is also not included. Therefore the Gross Margins in this publication ***exclude subsidies***.

### ***Interpretation of data***

When comparing individual enterprise data against the performance indicators it is most unlikely that each aspect of performance will be in the same farm performance category. For instance, some criteria could be in the ‘excellent’ category while others may not. If improvements are sought in overall enterprise performance it is important to consider all of the impacts of any proposed change on other criteria. In consequence, care must be taken when endeavouring to improve performance and it may be worthwhile to seek advice to ensure that proposals are sound and do not have a deleterious effect on other performance criteria.

Farmers should be aware of how the performances of their enterprises compare with other farms and be able to determine which criteria, if any, can be improved. This analysis is likely to be the first step for many farmers on a pathway to try to improve their farm income.

Many sources of farm performance data are available in the UK, mainly from the Universities which collect and analyse data on behalf of the Department of the Environment, Food and Rural Affairs (DEFRA) for the FBS in England and Wales. For Northern Ireland farmers, data derived from the NI FBS can be obtained by contacting Policy and Economics Division, Dundonald House, Belfast BT4 3SB (028 9052 4679) or on the Department of Agriculture and Rural Development web site at [www.dardni.gov.uk](http://www.dardni.gov.uk).

## SUMMARY OF MAIN ENTERPRISE GROSS MARGINS 2005/06

## TERMS AND DEFINITIONS

**Enterprise output of a livestock enterprise** is the total of livestock and product sales; transfers to other enterprises; produce consumed in the farmhouse and by farm workers; subsidies; compensation payments and net leasing receipts and closing valuation minus purchases of livestock, transfers-in of livestock from other enterprises and opening valuation of livestock. Single farm payment and LFA compensatory allowance is not included in livestock enterprise output.

**Enterprise output of a crop** is the sum of: crop sales; market value of crop unsold, fed to livestock, used for seed, consumed in the farmhouse and by farm workers. Single farm payment is not included in enterprise output of a crop.

**Variable costs** are those costs which can both be readily allocated to a specific enterprise and will vary in approximately direct proportion to changes in the scale of that enterprise. They include fertilisers, sprays, seed, concentrate feedingstuffs, veterinary and leasing costs.

**Feedingstuffs:** expenditure on feed and feed additives including the value of milk transferred from the dairy herd and fed to livestock; adjustments for changes in stock; market value of home-grown cereals fed.

**Seeds:** expenditure on seed; adjustments for changes in stock; market value of home-grown seeds used including potatoes.

**Fertilisers:** expenditure on fertilisers and lime.

**Gross Margin** of an enterprise is its enterprise output less its variable costs. For a livestock enterprise the variable costs include the allocated variable costs of grass and other forage crops.

**Cow equivalent (CE):** to facilitate comparisons between grazing based enterprises the gross margins of the enterprises are frequently expressed in terms of £s per cow equivalent. Cow equivalent is a mechanism for converting different categories of grazing livestock to a common denominator, in this case a dairy cow. Coefficients for the conversion of different categories of grazing livestock to cow equivalents are as follows: dairy cow = 1.0; beef cow = 0.8; breeding bull = 1.0; cattle over 2 years old = 0.8; cattle 1 to 2 years = 0.6; cattle under one year = 0.4; breeding ewe and lambs = 0.2; breeding ram = 0.2; lambs six months to 1 year = 0.1; other sheep over 1 year = 0.2.

**Fixed costs** are those costs which do not vary with small changes in the scale of individual enterprises or cannot be readily allocated to individual enterprises. Examples are regular labour machinery costs, rent and rates, and general overhead expenses.

***Upkeep and running costs of machinery:*** expenditure on vehicle fuel and oil; repairs; small tools.

***Labour:*** salaries; wages; employers' insurance contributions; unpaid family labour calculated at the appropriate rate for comparable paid labour.

***Depreciation of fixed capital expenditure:*** depreciation of buildings and fixed equipment (over 10 years).

**Depreciation of machinery and equipment:** depreciation of machinery and equipment calculated on a replacement cost basis (normally over 4 years for self propelled machinery and 7 years for other machinery).

**Other general farming costs:** farm fuel (farm share), farm rates, building repairs and miscellaneous land and building costs (hedge cutting, fences etc).

## Farm Business Type

<b>Dairy</b>	More than two-thirds of total Standard Gross Margin (SGM) from dairying including associated young stock.
<b>Cattle and Sheep</b>	Farms which do not qualify as Dairy farms but have more than two-thirds of total SGM from cattle and sheep. They are further subdivided into farms where more than half of the land farmed is in Less Favoured Areas (LFA) and Lowland (those which have less than 50% of land in the LFA) categories.
<b>Cereals</b>	More than two-thirds of total SGM from cereals, oilseeds, peas and beans harvested dry and set-aside.
<b>General Cropping</b>	Farms which do not qualify as Cereals farms but have more than two-thirds of total SGM from arable crops (including field scale vegetables) or in a mixture of arable and horticultural crops.

<b>Mixed Livestock</b>	Crops account for one-third, but less than two-thirds of total SGM and livestock account for one-third, but less than two-thirds of total SGM.
<b>Pigs and Poultry</b>	More than two-thirds of total SGM from pigs and/or poultry.
