General Footnote

Available and Occupied beds are shown by their specialty. In some cases, patients from a different specialty will at times occupy these beds. In these cases the patients will be shown against the specialty of their consultant. As a result some anomalous figures will occur in this publication particularly with regard to throughput and particularly with regard to smaller specialties. The calculation of average length of stay assumes that patients spend the entire length of their stay in hospital within the same specialty. On occasions, patients may be transferred between specialties during the same stay in hospital. In these circumstances, such transfers may slightly skew the average length of stay at a specialty level.

Definitions

Average Available/Occupied Beds

The average number of available and occupied beds during the year in wards which are open overnight, measured at midnight. Hospitals may also have a number of beds in wards which are only open during the day. Beds reserved for day care admission or regular day admission are not included.

Average Length of Stay

A measurement of the average length of time spent in hospital. Day Cases are excluded from the calculation.

$$\frac{\text{Average Daily Number of Occupied Beds x Days in Year}}{\text{Total Discharges, Deaths \& Transfers to Other Hospitals}}$$

% Occupancy

A measurement of the percentage of time that beds are occupied. Day cases are excluded from the calculation.

$$\frac{\text{Average Daily Occupied Beds}}{\text{Average Daily Available Beds}} \text{ x } 100$$

Throughput

A measurement of the average number of ordinary admissions treated in each available bed open overnight each year. Day Cases are excluded from the calculation.

$$\frac{\text{Total Discharges, Deaths \& Transfers to Other Hospitals}}{\text{Average Number of Available Beds}}$$

Turnover Interval

A measurement of the average length of time a bed open overnight remains unoccupied between ordinary admissions. Day Cases are excluded from the calculation.

$$\frac{\text{Average Available Beds - Average Occupied Beds x Days in Year}}{\text{Total Discharges, Deaths \& Transfers to Other Hospitals}}$$

Percentage Day Cases

The number of Day Cases is given as a percentage of all admissions.

$$\frac{\text{Total Day Cases}}{\text{(Total Discharges, Deaths \& Transfers to Other Hospitals) + Total Day Cases}} \text{ x } 100$$

Inpatient

Ordinary admissions, day cases and regular day or night admissions.

Ordinary Admission

Ordinary admissions include both (a) patients admitted electively with the expectation that they will remain in hospital for at least one night, and (b) non-elective admissions (e.g. emergency admissions). A patient who is admitted with this intention but who leaves hospital for any reason without staying overnight is still counted as an ordinary admission. Day cases are not included.

Day Case

A patient admitted electively during the course of a day with the intention of receiving care who does not require the use of a hospital bed overnight and who returns home as scheduled. If this original intention is not fulfilled and the patient stays overnight, such a patient should be counted as an ordinary admission.

Regular Day/Night Admission

A patient who is admitted electively and regularly for a planned sequence of days or nights and who returns home for the remainder of the 24 hour period. This method of admission is particularly common for Renal Dialysis and Chemotherapy.

Discharges & Deaths

This is the total count of ordinary admissions leaving hospital (either because of death, discharge or transfer to another hospital).

Specialty

A specialty is a particular branch of medicine or surgery. Each consultant is assigned a main specialty from a list recognised by the Royal Colleges and Faculties. Information is recorded against the specialty of the treating consultant.

Explanatory Notes

Source: The data contained in this publication have been compiled from the quarterly Korner Aggregate Returns (KARs), which were introduced from 1 April 1988. They refer to all general, mental illness and learning disability hospitals along with their associated transport services. Any amendments notified by Providers after 21 August 2009 have not been included.

Hospitals/Providers: In accordance with the Review of Public Administration, with effect from the 01 April 2007, five new integrated Health and Social Care Trusts (Belfast, Northern, South Eastern, Southern and Western) replaced the previous eighteen provider Trusts in Northern Ireland. Tables have been presented based on the new Trust Areas.

This bulletin presents data broken down by individual hospitals and Providers where possible. A small number of analyses have not been broken down in this way but rather have been disaggregated by Board of Treatment due to the nature of the return on which the analysis is based. When comparing data at Provider level with earlier years it is important to note that a number of hospitals are now attached to different Providers than was the case previously (see Appendix 2 for a complete list of hospitals/Providers for 2008/09).

Rounding: The data for individual hospitals on certain indicators (e.g., 'Average Available Beds') will not always sum to the Provider total or the overall NI total due to rounding. In addition, certain indicators (e.g. 'Throughput') have been derived from unrounded figures for greater accuracy. They may therefore differ slightly from values obtained through using rounded figures in the formulae.

Data Availability/Format: All of the data contained in the tables are also available on a quarterly basis and can be supplied by individual specialty or hospital/Provider if this level of detail is required (as in previous bulletins). In addition, data can be supplied in spreadsheet format (Microsoft Excel) in order to aid secondary analysis. The tables are also available at http://www.dhsspsni.gov.uk/index/stats_research/stats-pubs.htm for those with internet access.

Available and Occupied Beds: These are shown by their specialty. In some cases, patients from a different specialty will, at times, occupy these beds. In these cases, the patients will be shown against the specialty of their consultant. As a result, some anomalous figures will occur in this publication, particularly in regard to throughput and particularly with regard to smaller specialties.
